WHAT TO DO WHEN SEXUAL ABUSE IS SUSPECTED IN A PRE-PUBERTAL CHILD ANN S. BOTASH, MD DIRECTOR, CARE PROFESSOR OF PEDIATRICS

OBJECTIVES

Analyze a case of child sexual abuse and describe how to take the history, do the physical exam, determine appropriate testing and document the case.

Explain how to utilize a SANE/SAFE when child sexual abuse is suspected.

CASE

- A 9 year old prepubertal girl discloses that she was sexually abused by her grandfather.
- The last incident was 2 weeks ago and she describes that she had some blood in her underwear at that time but that she is no longer having genital pain and feels fine.
- The abuse has been ongoing for the last two years and the only reason that she told her teacher is that she is worried that her younger sister is now being abused as well.
- She describes hand to genital contact and denies any genital to genital contact.

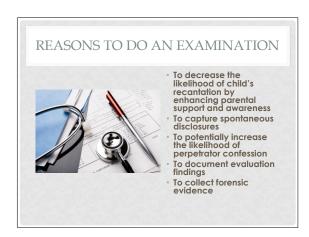

REASONS TO DO AN EXAMINATION

- To reassure the child and family that the child is healthy
 To assess the medical needs of the child and to treat injuries, infections, and/or provide prophylaxis
 To assess and address emotional, social, mental health, and developmental needs of the child and family and provide crises intervention To refer for medical, mental health, and social issues
 To assess safety and intervene to prevent further abuse

Professor of Pediatrics SUNY Upstate Medical University Synaute, New York http://www.champprogram.com/pdf/07-0402-Triage.pdf

WHO SHOULD EVALUATE THIS CHILD?

- Primary care physician, NP or PA?
- Emergency Department doctor?
- Sexual Assault Forensic Examiner?
- Child Abuse Pediatrician?

SECOND OBJECTIVE...

• Explain how to utilize a SANE/SAFE when child sexual abuse is suspected.

SANE

- Model program for pediatric sexual abuse forensic evidence collection.
- collection.

 Nurses work within
 practice parameters to
 examine, photograph and
 document history and
 findings.

 Reduces need for repeat
 examinations.
- Improves legal outcomes, medical treatment and possibly also psychological outcomes.

SANE

 Forensic evidence need must be considered early on and weighed with acute medical needs. ·History, Exam, Treatment, Documentation and Interpretation (Diagnosis) is still the role of the physician.

SANE: THINGS TO CONSIDER

- Forensic evidence in cases of significant physical abuse
- Order of exam/collection of specimens for culture and for evidence
- Even if >96 hours, might consider SANE for cases where there are findings

HISTORY

Complete history, including:

- Caregiver concerns related to sexual abuse
 Disclosures from child
- · Behavioral concerns

- Reported perpetrator (child, adult, relative)
 Type of contact by reported perpetrator
 Date / time of last possible contact by perpetrator

Do not discard clothing or clean patient if forensic evidence collection is planned.

HISTORY OF GENITAL BLEEDING

- Trauma to genital area
- Rectal tears from constipation
- Urinary tract pathology or infection
- Genital tract disease pathology (infections, tumors, other)
- Skin Conditions
- Poor hygiene
- More complete differential:

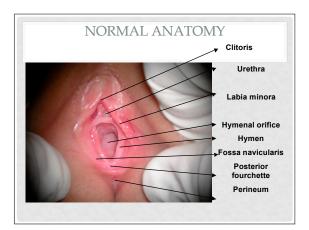

HOW TO DO THE PHYSICAL **EXAMINATION**

Physical

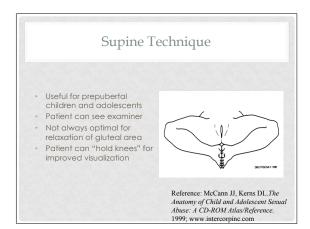

Complete physical examination, especially:

- Inspection of all body parts and thorough skin exam
- Oral examination (lip, tongue, buccal) to look for frenula tears, palatal petechiae, or dental injuries
- Complete genital examination to look for signs of acute injury or other abnormalities

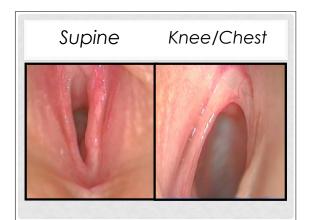

EXAMINATION TECHNIQUES

Supine Frog-leg position Knee chest position Standing Lateral Decubitus Labial traction vs. Spreading

Prone Knee Chest May be uncomfortable due to head down position May cause fear and anxiety View of rectum and vaginal area may be better than other positions Reflex dilation may be more apparent if position is held too long Reference: McCann JJ, Kerns DL. The Anatomy of Child and Adolescent Sexual Abuse: A CD-ROM Atlast Reference. 1999; www.intercorpinc.com

Standing

- Could be a position of comfort for patient
- Legs should be spread and back bent forward

Lateral Decubitus

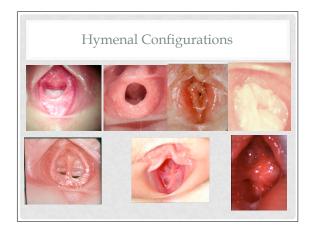

- Position of comfort
- Patient can assist by holding onto knees
- Position commonly used for rectal examination

LABIAL TRACTION

The 9 year old

- The last incident was 2 weeks ago and she describes that she had some blood in her some blood in her underwear at that time but that she is no longer having genital pain and feels fine. She describes hand to genital contact and denies any genital to genital contact.

CONSULTS

- Hospital Social Work
- Gynecology consult if acute vaginal bleeding and possible need for EUA
- Surgery consult if significant rectal bleeding and potential for rectal perforation
- Dermatology Consult
- SANE (Sexual Assault Nurse Examiner) and Advocacy services

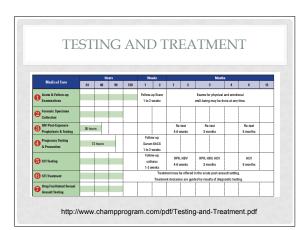

DIAGNOSTIC TESTS

Routine tests:

- Dirty catch urine specimen or vaginal gen-probe for GC and Chlamydia
- Cultures for STI's GC and Chlamydia cultures for anal specimens and a GC culture for pharyngeal specimen

COCAN GUIDELINES: AAP

Pediatrics 2005 116;506-512 Adapted for 2006 CDC STD Treatment Guidelines: MMWR 55 (No. RR-11):1-100, 2006. TABLE 6. Implications of commonly encountered sexually transmitted (ST) or sexually associated (SA) infections for diagnosis and reporting of sexual abuse among infants and prepubertal children

ST/SA Confirmed	Evidence for sexual abuse	Suggested action
Gonorrhea*	Diagnostic†	Report§
Syphilis*	Diagnostic	Report§
Human immunodeficiency virus¶	Diagnostic	Report§
Chlamydia trachomatis*	Diagnostic†	Report®
Trichomonas vaginalis	Highly suspicious	Report§
Condylomata acuminata (anogenital warts)*	Suspicious	Report§
Genital herpes*	Suspicious	Report§**
Bacterial vaginosis	Inconclusive	Medical follow-up

Adapted from: Kellogg N, American Academy of Pediatrics Committee on Child Abuse and Neglect. The evaluation of sexual abuse in children. Pediatrics 2005;16:506–12.

*It not likely to be perinatally acquired and rare nonsexual vertical transmission is suched.

*e.gold standard, current studies are investigating the use of nucleic acid amplification tests as an alternative diagnostic method.

*for Report to the agency mandated to receive reports of suspected child abuse.

*for the committee of t

NAATS

- NAATs (SDA, TMA) and use of noninvasive specimens (urine) can be used for detection of C. trachomatis in prepubertal girls if positives can be confirmed.
- None of the available NAATs are approved for rectal specimens, will still need to do culture.
- NAATs may not offer a significant advantage over culture for detection of GC.
- Positives should be confirmed by culture or repeat NAAT using a different method.

WHEN WE MIGHT CONSIDER NAATS

- · If patient uncooperative or young,
 - · Urine NAAT
 - First void best (NOT clean catch)
 - If urine positive, confirm with culture, or at minimum, second urine NAAT

Palusci V, Reeves. Ped Infec Dis J 2003. Jul;22(7): 618-23.

- If suspicion for infection exists with negative culture (esp Chlamydia).
- · Follow up can be assured.

DIAGNOSTIC TESTS

Consider:

- CBC with platelets, LFTs, CMP Hepatitis B surface antibody and surface antigen, Hepatitis C antibody, HIV, and an RPR or VDRL
- Forensic Evidence Kit per SANE consult if last contact within 96 hours
- Stool guaiac for occult blood
- Urinalysis and urine culture if symptoms also consistent with UTI

DOCUMENTATION

- · History obtained, from whom and to whom
- Physical findings with drawings and measurements
- Tests ordered and performed and results
- Impression: suspected abuse, physical exam consistent with the history...

Do not attempt to further interpret findings if there will be a child abuse consultation.

Impact statement to be faxed to CPS or police

INTERPRETATION OF FINDINGS

Adams JA. Guidelines for medical care of children evaluated for suspected sexual abuse: an update for 2008. Curr Opin Obstet Gynecol. 2008 Oct; 20(5):435-41.

INTERPRETATION OF FINDINGS Table 1 Agronach to interpretation of medical findings in suspected dhild sexual abuse Trulyage documented in investmen or commonly, sean in conducted children this presence of these findings generally neither confirms nor decreased, which can declined or desired about on the confirmation of the season of the confir

REPORTING

Call Child Protective Services Hotline 1-800-635-1522 to make a report.

- Ask them to check if there are other children in the home. They must be evaluated by either their PMD or the child abuse expert.
- Ask for a scene investigation, if necessary.

As a licensed professional, you are required to report suspected abuse. A referral to the child abuse expert is not the same as a Hotline report to Child Protective Services.

Reviewed: how to take the history, do the physical exam, determine appropriate testing and document the case. Role of SANE/SAFE when child sexual abuse is suspected. Every child deserves a skilled medical exam when abuse is suspected.
